Desert Landscaping: How To Start And Maintain A Healthy Landscape In The Southwest

Synopsis

George Brookbank has distilled nearly twenty years' experience as an extension agent in urban horticulture with the University of Arizona into a practical book that tells how to avoid problems with desert landscaping before they occur and how to correct those that do. In the first part, "How to Start and Maintain a Desert Landscape," he provides 28 easy-to-use chapters that address concerns ranging from how to start a wildflower garden to how to cope with Texas root rot. In Part Two, "A Month-By-Month Maintenance Guide," he offers a handy almanac that tells what to do and what to watch out for each month of the year, with cross-references to the chapters in Part One. Homeowners who maintain their own landscape will find in this book ways to make the work more satisfying and productive, while those who hire landscape contractors can make sure the work is done effectively and economically. "You'll find all kinds of books on desert landscape design and materials, irrigation system and design, and landscape installation," says Brookbank. "So far as I know, however, this is the only book that tells you what to do with what you've got and how to keep it growing."

Customer Reviews

"It is this hands-on approach that makes Brookbank's books, like the man, so accessible."

—Phoenix Home and Garden "The spare supply of books on this subject makes any new entry welcome. . . . But this is not just any new entry, but an exceptionally practical and helpful one."

—Prime Time "Exceptionally practical and helpful . . . This is a dandy!" —Book Talk

Older approach to landscape maintenance since it's publication in 1992 a lot has changed in the
irrigation world. Going from enough water to drought wasn't addressed.

very interesting,informative bookl.

Good product. Worth the price. If you think this might be what you're looking for today, give it a try.

Good reference

great ideas and good reading with how it should be done, wish the pictures were in color, can't get
good idea in black and white

I have lived on high desert Tularosa Basin for almost six years with initial grass planted by builder /
developer who also installed underground irrigation system. Overly hot, dry climate led to select
grass seed planting during two or three subsequent years.But the amount of time, work and money
has resulted in poor grass , unsightly, and with numerous bald spots.So it was with the reminder
that trying to grow grass in a desert may not be productive that I would take a modest investment in
trying a different approach.Will this be more satisfying?Ed Walsh

Not very happy with this book. The only color photo is the cover. All other photos are black and
white, and don't do justice to depicting landscaping and flowers. Book was copyrighted
approximaqtely 18 years ago, therefore feel it is somewhat out of date with knowledge.

Great resource for those of us who feel so left out with most landscaping texts. I live in the high

desert of Nevada that has Alpine woods 10 miles one way and arid, sagebrush prairies 5 miles the other. This book actually provides for some interesting options that shall enable me to combine some of each into a cohesive landscape plan for my yard. Some really neat ideas here!
