Approximation Algorithms For NP-Hard Problems

Synopsis

This is the first book to fully address the study of approximation algorithms as a tool for coping with intractable problems. With chapters contributed by leading researchers in the field, this book introduces unifying techniques in the analysis of approximation algorithms.

Book Information

Hardcover: 624 pages

Publisher: Course Technology; 1 edition (July 26, 1996)

Language: English

ISBN-10: 0534949681

ISBN-13: 978-0534949686

Product Dimensions: 9.6 x 6.6 x 1.2 inches

Shipping Weight: 2 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars 1 customer review

Best Sellers Rank: #690,268 in Books (See Top 100 in Books) #106 in Books > Science & Math > Mathematics > Applied > Linear Programming #261 in Books > Science & Math > Mathematics > Pure Mathematics > Discrete Mathematics #2463 in Books > Textbooks > Computer Science > Programming Languages

Customer Reviews

Developing approximation algorithms for NP hard problems is now a very active field in Mathematical Programming and Theoretical Computer Science. This book is actually a collection of survey articles written by some of the foremost experts in this field. Many of these developments are due to Mathematical programming (primal dual, semidefinite programming et al). The most exciting of these has been the Goemans and Williamson algorithm for MAX CUT and MAX SAT. A good account of these techniques appears in Chapters 4 and 11. On the other hand a sequence of unexpected results in complexity culminated in a proof that many of these problems cannot have polynomial approximation algorithms unless $P=NP$. A good survey of "Hardness of Approximations" appears in Chapter 10, written by Sanjeev Arora and Carsten Lund both of whom were responsible for some original developments in this field. I am going to purchase a copy of this book and can only strongly recommend it to everyone.
