Everything a gardener needs to know about native plants for a Southwestern landscape.

Great book!!

This is a great book - very helpful and well organized.

This is a perfect book for the beginner landscaper in the southwest. Although it does not go into great detail about specific plants, it does give a good general description of the plants of the southwest.

I live in the desert, dry and humid but wanted pretty landscaping around my new home....this book helped me out so much...with tips, and great pics plus on the spot zoning.....I recommend to anyone.

If you are moving to or living in the Southwest and want to do your own landscaping at any level this is a very helpful book I might even call it a must have!

No one in this area this is more for Arizona or farther west. I don't have any more words now

As an environmental horticulturist in the Coachella Valley of California, I can strongly recommend this book as a very helpful desert garden guide. The plants and suggestions in the book are very

good if one keeps in mind their location, elevation and soil type. I especially like that Miller gives the minimum water tolerance of individual plant species as most desert guides written in Arizona/New Mexico recommend too little water for sandy soils of the Coachella valley. California is not included as part of the southwest but those of us gardening in southeastern California know that we have much more in common horticulturally with southern Arizona than with the rest of our State. This book is one of only a half dozen good desert garden guides. *Native Plants for Southwestern Landscapes*

Any residing or gardening in the southwest will find *Landscaping with Native Plants of the Southwest* an invaluable reference, as will libraries catering to Southwest residents. It covers not just domestic plants but wildflowers, trees, and cacti, offering a compendium of 'top picks' chosen and rated for their best ornamental and growth qualities and including maps and charts as guidelines for planting, maintenance and landscape design. Over 350 native plant species, subspecies and varieties are detailed and as interest in xeriscaping arises, any area interested in low-water planting will find it of interest.
