The Coast Of Australia

Synopsis

Australia has one of the longest, most diverse and pristine coastlines in the world. From the oldest rocks on the planet to those that are still evolving, the Australian coast is a dynamic, ever-changing suite of dramatic landforms and productive ecosystems. From iconic beaches such as Bondi and long unbroken sands of the Coorong to the endless curtain of the Nullarbor cliffs along the Great Australian Bight, this illuminating book explores these magnificent landforms, revealing how they formed and continue to change. It details the various coastal systems that operate, including beaches, dunes, estuaries, deltas, rocky coast and coral reefs. Written by two of Australia's leading coastal experts, Andrew Short and Colin Woodroffe, *The Coast of Australia* provides the first comprehensive account of the Australian coast. Covering 36,000 km of shoreline, *The Coast of Australia* is an engaging exploration of this massive, largely undeveloped and highly variable coastline.

Customer Reviews

'... what makes this book so special is that, in addition to the 'wow-factor' arising from the over 200 colour photographs, it also offers an excellent synthesis of how the Australian coast has evolved. ... The book is extremely well-written and attractively type-set, and colour photographs and diagrams are used throughout. ... The book is excellent and certainly does credit to the magnificent Australian coast by giving an in-depth and comprehensive insight into its variability and evolution.' *The Geographical Journal*

This is an unusual book that appeals to the expert as well as the casual beach lover. Excellent information and wonderful photography!

Great product, great transaction!! really well made and easy to put together Works extremely well This product is very suitable for me, simple design and reasonable price, the product is very good. very good product, especially in such a low price to buy it, I am very happy. Very pleased with item and the exceptionally generous customer service I received. nice item that works as advertised

You might think from the title and cover photo that this is a typical coffee-table travelogue book. Big, and stuffed with many colour photos of Australian beaches. Well to be sure, there are indeed numerous pretty shots of the coastline. But the book is a more serious technical study of the coast. It can be best suited for the geography, geology or oceanography student. The discussion looks at the structures of the beaches and of the nearby underwater shelves. So for example if you are a student or just a beachgoer, the book can be a fascinating and deeper analysis of what makes a beach. The discussion includes topics like why a beach often has a surf zone, and how sand is transported by waves and how a beach can be eroded. You can appreciate that every beach is a dynamic region, where the actions of change are more obvious than in the wind erosion of land structures. The book points out that Australian beaches are dominated by the transverse bar and rip type. Think of the beaches that you have swam in; perhaps some were too like this? The coverage is extensive. I have never seen a book like this, with its national comprehensive understanding of all of Australia's beaches.
